Classifying Brain Tumors

Training CNNs on MRI Scans of Brains

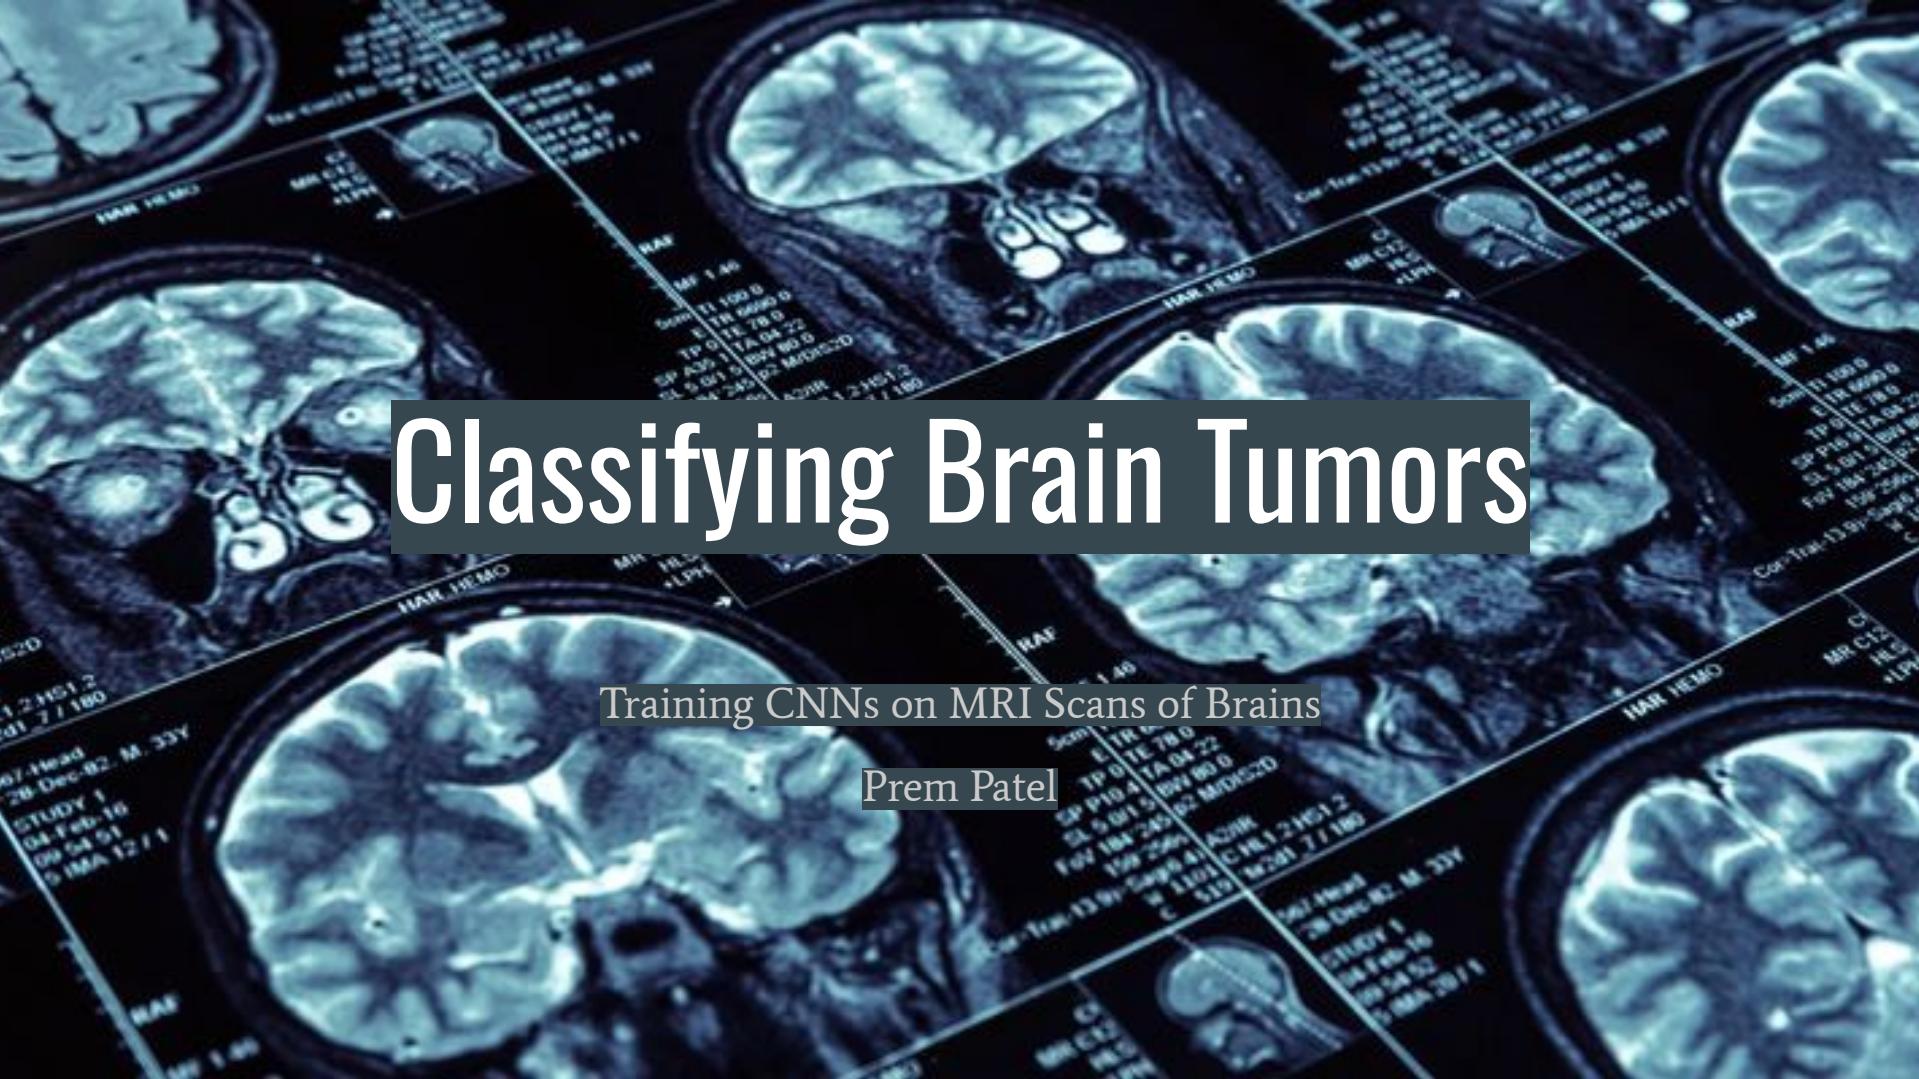

Prem Patel

The Problem

- Disease classification is hard
- Brain tumors vary in size, shape, severity, location
- Like any form of disease, early detection is *imperative*
- Physicians and medical professionals are burdened now more than ever
- Worse for the patient, results can take several days to be returned

The Goal

- Biomedical Data Scientist @ UW Health (University of Wisconsin)
- I want to show the board that CNNs can be trained to detect all manner of diseases
 - I will focus on 7000+ images of MRI scans of brains (healthy & non-healthy)
- Reduce the time from scan to diagnosis
- Be complementary aids for our doctors and nurses

Brief Background on the Classes

Gliomas

- Type of brain cancer that forms in the glial cells of the brain and spinal cord
- Typically cancerous and can spread (malignant) → Glioblastomas
- 5-year survival rate from 5% to 95%
- Account for roughly 33% of all brain tumors

Meningiomas

- Forms in the meninges, tissue covering the brain & spinal cord
- *Majority* are benign, but can regrow if not completely removed
- Depending on age, 5-year survival rates vary from 60% to 95%

Pituitary

- Originate in the Pituitary gland
- Most are benign, and non-cancerous (pituitary adenomas)
- Outlook of recovery is considered very good if detected early

The Strongest Model - *Xception*

The Model

- Using transfer learning from a pretrained model, Xception
- Model has been trained on over 1 million images
- Appended Dropout layers to limit overfitting

Model Summary:

Model: "sequential_6"

Layer (type)	Output Shape	Param #
xception (Functional)	(None, 2048)	20861480
flatten_6 (Flatten)	(None, 2048)	0
dropout_6 (Dropout)	(None, 2048)	0
dense_9 (Dense)	(None, 64)	131136
dropout_7 (Dropout)	(None, 64)	0
dense_10 (Dense)	(None, 4)	260

Total params: 20992876 (80.08 MB)

Trainable params: 20938348 (79.87 MB)

Non-trainable params: 54528 (213.00 KB)

Performance

- Arguably, strongest indicator of the model is the ability to identify a tumor (binary classification)

	notumor	glioma	meningioma	pituitary	accuracy
precision	0.990123	0.861272	0.962838	0.996212	0.951182
recall	0.990123	0.993333	0.931373	0.876667	0.951182
